BIKEFITTING.COM PORTAL RELEASE NOTES V0.1.1

Translations:
- Issue with Chinese and Japanese characters have been resolved.
- Language settings can now be changed in the main menu by the user.
- Translations are also applied to the report, creating the option to generate a report in a different language for certain customers.
- Traditional Chinese and Brazilian Portuguese were added as new languages.
- Several smaller changes and updates to translations were made in multiple languages based on requests and feedback.

Database:
- The user will be able to review and search the full frame geometry database from the main menu. Bikes can be searched based on category, brand and model.
- The geometry data for every bike can be reviewed in a separate geometry table for all sizes available in that model.

My Brands:
- From the main menu, (bike) brands can be selected that are relevant to the fitter/bikeshop.
- Only selected brands will be available in the drop down menu during the fit. The complete frame geometry database can continue to be investigated in full.

Bikefiltering:
- Bikes can now be registered under multiple categories, enabling bikes from related categories to be used for different fittings (eg Road bikes for Triathlon Short fits, Cyclocross bikes for Gravel fits etc).

Algorithm:
- Adjustments were made in the algorithm to improve stem length advice in the applied model.

Data:

- MY25 frame geometry data was added for almost 7500 bikes across the 50 biggest bike brands. Additional frame geometries will continue to be added on a quarterly basis. For requests, please contact your local Shimano/Bikefitting.com distributor.
